

PromptOps Starter Kit (Governance + Templates)

Practical checklist you can use immediately. No hype. No fluff.

Checklist

- Create a single prompt registry (one source of truth).
- Assign owners: who can change prompts and who approves.
- Add a review step: brand voice, safety, compliance, accuracy.
- Red-team prompts: jailbreak attempts, edge cases, bad inputs.
- Versioning: semantic versions (v1.2.0) + changelog.
- Environment split: dev → staging → production prompts.
- Telemetry: cost per output, latency, quality score, drift alerts.
- Rollback plan: revert prompt within minutes, not days.
- Template library: reusable building blocks for your team.
- Monthly audit: remove dead prompts, consolidate duplicates.
